Bromine CHEMets® Kit

K-1605/R-1605: 0 - 2.2 & 0 - 11 ppm

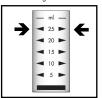

Safety Information

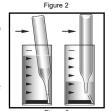

Read SDS (available at www.chemetrics.com) before performing this test procedure. Wear safety glasses and protective gloves.

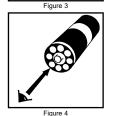

Test Procedure

- 1. Add 5 drops of A-1600 Activator Solution to the empty sample cup (fig. 1).
- 2. Fill the sample cup to the 25 mL mark with the sample to be tested (fig. 2).
- 3. Immediately place the CHEMet ampoule, tip first, into the sample cup and snap the tip. The ampoule will fill leaving a bubble for mixing (fig. 3).
- To mix the ampoule, invert it several times, allowing the bubble to travel from end to end.
- 5. Dry the ampoule. Obtain a test result **1 minute** after snapping the tip.
- 6. Obtain a test result using the appropriate comparator.
 - a. Low Range Comparator (fig. 4): Place the ampoule, flat end first, into the comparator. Hold the comparator up toward a source of light and view from the bottom. Rotate the comparator until the best color match is found.

b. High Range Comparator (fig. 5): Place the ampoule between the color standards until the best color match is found.

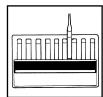

Figure 5

Test Method

The Bromine CHEMets[®]1 test kit employs the DPD chemistry.^{2,3} The sample is treated with an excess of potassium iodide. Bromine oxidizes the iodide to iodine. The iodine then oxidizes DPD (N,N-diethyl-p-phenylenediamine) to form a pink colored species in direct proportion to the bromine concentration.

Various oxidizing agents such as halogens, ferric ions and cupric ions will produce high test results.
